

AS24 VENTED SHEET

The Steadman AS24 Vented wall cladding sheet has been developed to meet the agricultural industry's need for really effective ventilation. With louvres on both sides of the sheet the airflow has been increased to generate an even greater movement of fresh air.

The combination of the AS24 vented wall cladding sheet with the absorbent qualities of Steadmans AS6 Reinforced Fibre Cement roof sheeting provides an effective guard against the build up of the corrosive cocktail of animal gases, waste and the condensation created by damp and humid conditions generated by over-wintering livestock.

- Louvred both sides for maximum ventilation.
- Extra wide airflow passage.
- Increased air flow in comparison to Yorkshire Boarding.
